MCQ Questions for C++

Topic 1

- 1. In an assignment statement a=b Which of the following statement is true?
 - a. The variable a and the variable b are equal.
 - b. The value of b is assigned to variable a but the later changes on variable b will not affect the value of variable a
 - **c.** The value of b is assigned to variable a and the later changes on variable b will affect the value of variable a
 - **d.** The value of variable a is assigned to variable b and the value of variable b is assigned to variable a.

Answer: B

2. All of the following are valid expressions in C++ a = 2 + (b = 5); a = b = c

= 5; a = 11 % 3

- a. True
- b. False

Answer: A

3. To increase the value of c by one which of the following statement is

wrong?

- a. c++;
- b. c = c + 1;
- c. c + 1 => c;
- d. c += 1

Answer: C

- 4. When following piece of code is executed, what happens? b = 3; a = b++;
 - a. a contains 3 and b contains 4
 - b. a contains 4 and b contains 4
 - c. a contains 4 and b contains 3
 - d. a contains 3 and b contains 3

Answer: A

- 5. The result of a Relational operation is always
 - a. either True or False
 - b. is less than or is more than
 - c. is equal or less or more
 - d. All of these

Answer: A

- **6.** Which of the following is not a valid relational operator?
 - a. ==
 - b. =>
 - c. >=
 - d. >=

Answer: E

7. What is the final value of x when the code int x; for(x=0; x<10; x++) {} is

run?

- A. 10
- B. 9
- C. 0
- D. 1

Answer; A

- 8. When does the code block following while (x<100) execute?
 - A. When x is less than one hundred
 - B. When x is greater than one hundred
 - C. When x is equal to one hundred
 - D. While it wishes

- 28. Which of the following is true?
 - A.
 - 1 В. 66
 - C.
 - D. All of the section

.1

Answer: D

- 29. Which of the following is the boolean operator for logical-and?
 - A. &
 - B. &&
 - C.
 - D. |&

Answer: B

- 30. Evaluate!(1 &&!(0 || 1)).
 - A. True
 - B. False
 - C. Unevaluatable

Answer: A

- 31. The void specifier is used if a function does not have return type.

- 32. You must specify void in parameters if a function does not have any arguments.

- 33. Type specifier is optional when declaring a function
 - A. True
 - B. False

- 34. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)
 - A.

- 35. In case of arguments passed by values when calling a function such as z=addidion(x,y),
 - A. Any modifications to the variables x & y from inside the function will not have any effect outside
 - B.
 - C.
 - D.

- 36. If the type specifier of parameters of a function is followed by an ampersand (&), that function call is

- 37. In case of pass by reference
 - A. The values of those variables are passed to the function so that it can manipulate them

 - C.
 - D.

- **38.** Overloaded functions are
 - A. Very long functions that can hardly run
 - B. One function containing another one or more functions inside it.
 - C. Two or more functions with the same name but different number of parameters or type.
 - D. None of the sections

Answer: D

- **39.** Functions can be declared with default values in parameters. We use default keyword to specify the value of such parameters.
 - A. True
 - B. False

Answer: B

40. Examine the following program and determine the output #include <iostream> using namespace std;

Answer: A

41. Find out the error in following block of code. If (x = 100)

Cout << "x is 100":

- a. 100 should be enclosed in quotations
- b. There is no semicolon at the end of first line
- c. Equals to operator mistake
- d. Variable x should not be inside quotation

Answer: (

- 42. Looping in a program means
 - A. Jumping to the specified branch of program
 - B. Repeat the specified lines of code
 - C. Both of above
 - D. None of above

Answer: B

- **43**. The difference between while structure and do structure for looping is
 - A. In while statement the condition is tested at the end of first iteration
 - B. In do structure the condition is tested at the beginning of first iteration
 - C. The do structure decides whether to start the loop code or not whereas while statement decides whether to repeat the code or not
 - D. In while structure condition is tested before executing statements inside loop whereas in do structure condition is tested before repeating the statements inside loop

44. Which of the following is not a looping statement in C++?

a. while
b. until
c. do
d. for

45. Which of the following is not a jump statement in C++?

- a. break
- b. goto
- c. exit
- d. switch

Answer: D

46. Which of the following is selection statement in C++?

- a. break
- b. goto
- c. exit
- d. switch

Answer: D

47. The continue statement

- a. resumes the program if it is hanged
- b. resumes the program if it was break was applied
- c. skips the rest of the loop in current iteration
- d. all of above

Answer: C

48. Consider the following two pieces of codes and choose the best answer *Code 1:* switch (x) { case 1: cout <<"x is 1"; break; case 2:

```
cout <<"x is 2"; break;
```

default:

cout << value of x

unknown"; }

Code 2

- A.Both of the above code fragments have the same behaviou
- B. Both of the above code fragments produce different effects
- C. The first code produces more results than second
- D.The second code produces more results than first

Answer: A

49. Observe the following block of code and determine what happens when x=2?

}

- a. Program jumps to the end of switch statement since there is nothing to do for x=2
- b. The code inside default will run since there is no task for x=2, so, default task is run
- c. Will display x is 3, so jumping to third branch and jumps to thirdBranch.
- d. None of above

Answer: C

- **50.** Which of the following is false for switch statement in C++?
 - a It uses labels instead of blocks
 - b. we need to put break statement at the end of the group of statement of a condition
 - c. we can put range for case such as case 1..3
 - d. None of above

Answer (

- 51. cin extraction stops execution as soon as it finds any blank space character
 - a. true
 - b. false

Answer: A

- 52. Observe the following statements and decide what do they do. string mystring; getline (cin, mystring);
 - a. reads a line of string from cin into mystring
 - b. reads a line of string from mystring into cin
 - c. cin can't be used this way
 - d. none of above

Answer: A

- 53. Regarding stringstream identify the invalid statement
 - a. string stream is defined in the header file <sstream>
 - b. It allows string based objects treated as stream
 - c. It is especially useful to convert strings to numerical values and vice versa.
 - d. None of above

Answer: D

- 54. Which of the header file must be included to use stringstream?
 - a. <iostream>
 - b. <string>
 - c. <sstring>
 - d. <sstream>

Answer: D

- 55. Which of the following header file does not exist?
 - a. <iostream>
 - b. <string>
 - c. <sstring>
 - d. <sstream>

Answer: C

- 56. If you use same variable for two getline statements
 - a. Both the inputs are stored in that variable
 - b. The second input overwrites the first one
 - c. The second input attempt fails since the variable already got its value
 - d. You can not use same variable for two getline statements

Answer: B

- 57. The "return 0;" statement in main function indicates
 - a. The program did nothing; completed 0 tasks
 - b. The program worked as expected without any errors during its execution
 - c. not to end the program yet.
 - d. None of above

Answer: B

- 58. Which of the following is not a reserve keyword in C++?
 - a. mutable
 - b. default
 - c. readable
 - d. volatile

Answer: C

- 59. The size of following variable is not 4 bytes in 32 bit systems
 - a. int
 - b. long int
 - c. short int
 - d. float

Answer: C

- 60. Identify the correct statement regarding scope of variables
 - a. Global variables are declared in a separate file and accessible from any program.
 - b. Local variables are declared inside a function and accessible within the function only.
 - c. Global variables are declared inside a function and accessible from anywhere in program.
 - **d.** Local variables are declared in the main body of the program and accessible only from functions.

Answer: B

Topic 2

- 61. Streams are
 - a. Abstraction to perform input and output operations in sequential media
 - b. Abstraction to perform input and output operations in direct access media
 - c. Objects where a program can either insert or extract characters to and from it
 - d. Both a and c

Answer: D

- **62.** Which of the following is known as insertion operator?
 - a.
 - b. v
 - c. <<
 - d. >>

Answer: C

- 63. Regarding the use of new line character (/n) and endl manipulator with cout statement
 - a. Both ways are exactly same
 - b. Both are similar but endl additionally performs flushing of buffer
 - c. endl can't be used with cout
 - d. \n can't be used with cout

Answer: B

- **64.** Which of the following is output statement in C++?
 - a. print
 - b. write
 - c. cout
 - d. cin

65. Which of the following is input statement in C++? a. cin b. input c. get d. none of above Answer: A 66. By default, the standard output device for C++ programs is a. Printer b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. < d. >>		Yellow
65. Which of the following is input statement in C++? a. cin b. input c. get d. none of above Answer: A 66. By default, the standard output device for C++ programs is a. Printer b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. < d. all of above Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)		Green
a. cin b. input c. get d. none of above Answer: A 66. By default, the standard output device for C++ programs is a. Printer b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. Palse Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. Palse Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)	Answer: C	
b. input c. get d. none of above Answer: A 66. By default, the standard output device for C++ programs is a. Printer b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: B 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: B 72. You must specifier is optional when declaring a function a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)	65. Which o	f the following is input statement in C++?
c. get d. none of above Answer: A 66. By default, the standard output device for C++ programs is a. Printer b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. a b. v c. < d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)	a.	cin
d. none of above Answer: A 66. By default, the standard output device for C++ programs is a. Printer b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. < d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)	b.	input
Answer: A 66. By default, the standard output device for C++ programs is a. Printer b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B	c.	get
66. By default, the standard output device for C++ programs is a. Printer b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)	d.	none of above
a. Printer b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B	Answer: A	
b. Monitor c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)	66. By defau	
c. Modem d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)		
d. Disk Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. < d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)		
Answer: B 67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)	-	
67. By default, the standard input device for C++ program is a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B 74. Study the following piece of code and choose the best answer int x=5, y=3, z; a=addition(x,y)		Disk
a. Keyboard b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B		
b. Mouse c. Scanner d. None of these Answer: A 68. Which of the following statement is true regarding cin statement? a. cin statement must contain a variable preceded by >> operator b. cin does not process the input until user presses RETURN key c. you can use more than one datum input from user by using cin d. all of above Answer: D 69. Which of the following is extraction operator in C++? a. ^ b. v c. << d. >> Answer: D 70. When requesting multiple datum, user must separate each by using a. a space b. a tab character c. a new line character d. all of above Answer: D 71. The void specifier is used if a function does not have return type. a. True b. False Answer: A 72. You must specify void in parameters if a function does not have any arguments. a. True b. False Answer: B 73. Type specifier is optional when declaring a function a. True b. False Answer: B		
c. Scanner d. None of these Answer: A 68. - 75. In case of arguments passed by values when calling a function such as z=addidion(x,y),
 - a. Any modifications to the variables x & y from inside the function will not have any effect outside the function.
 - **b.** The variables x and y will be updated when any modification is done in the function
 - c. The variables x and y are passed to the function addition
 - d. None of above are valid.

Answer: A

- 76. If the type specifier of parameters of a function is followed by an ampersand (&), that function call is
 - a. pass by value
 - b. pass by reference

Answer: B

- 77. In case of pass by reference
 - a. The values of those variables are passed to the function so that it can manipulate them
 - b. The location of variable in memory is passed to the function so that it can use the same memory area for its processing
 - c. The function declaration should contain ampersand (&) in its type declaration
 - d. All of above

Answer: B

- 78. Overloaded functions are
 - a. Very long functions that can hardly run
 - b. One function containing another one or more functions inside it.
 - c. Two or more functions with the same name but different number of parameters or type.
 - d. None of above

Answer: D

- **79.** Functions can be declared with default values in parameters. We use default keyword to specify the value of such parameters.
 - a. True
 - b. False

Answer: B

80. Examine the following program and determine the output #include <iostream.h> using namespace std;

```
int operate (int a, int b)
{
        return (a * b);
} float operate (float a,
float b)
{
        return (a/b);
}
int main()
{
        int x=5, y=2;
float n=5.0, m=2.0;
cout << operate(x,y)</pre>
<<"\t";
cout << operate (n,m);</pre>
return 0;
}
```

- a. 10.0 5.0
- b. 5.0 2.5
- c. 10.0 5
- d. 10 2.5

	ction cannot be overloaded only by its return type. . True
_	. False
Answer: A	
	s ction can be overloaded with a different return type if it has all the parameters
same	
	I. True
	. False
Answer: I	
	e functions involves some additional overhead in running time.
	a. True
	h False
Answer: A	
	ction that calls itself for its processing is known as
	. Inline Function
	Nested Function
	. Overloaded Function
-	. Overloaded Function
Answer: I	
	eclare a function with if it does not have any return type
	. long
	double
	. void
_	. void . int
Answer: (
	nents of a functions are separated with
	. comma (,)
	. semicolon (;)
	. colon (:)
	. None of these
Answer: A	
	bles inside parenthesis of functions declarations have level access.
	. Local
-	. Global
	. Module
-	. Universal
Answer: A	
	rve following function declaration and choose the best answer: int divide (int
	b = 2)
	. Variable b is of integer type and will always have value 2
	. Variable a and b are of int type and the initial value of both variables is 2
	. Variable b is international scope and will have value 2
	. Variable b is international scope and will have value 2
Answer: I	
	eyword endl
	. Ends the execution of program where it is written
	Ends the output in cout statement
	Ends the output in cour statement. Ends the line in program. There can be no statements after endl
	Ends the file in program. There can be no statements after endi
d	Ends current line and starts a new line in coult statement

- Which of the statements is true in a protected derivation of a derived class from a base class? (A) Private members of the base class become protected members of the derived class (B) Protected members of the base class become public members of the derived class
 - (C) Public members of the base class become protected members of the derived class
 - **(D)** Protected derivation does not affect private and protected members of the derived class.

Ans: C

- **99.** Which of the following statements is NOT valid about operator overloading?
 - **(A)** Only existing operators can be overloaded.
 - **(B)** Overloaded operator must have at least one operand of its class type.
 - **(C)** The overloaded operators follow the syntax rules of the original operator.
 - **(D)** none of the above.

Ans:D

- **100.** Exception handling is targeted at
 - (A) Run-time error (B) Compile time error (C) Logical error
 - **(D)** All of the above.

Ans: A

- **101.** A pointer to the base class can hold address of
 - (A) only base class object
 - **(B)** only derived class object
 - (C) base class object as well as derived class object
 - **(D)** None of the above

AnciC

- **102.** Function templates can accept
 - (A) any type of parameters
 - **(B)** only one parameter
 - (C) only parameters of the basic type
 - **(D)** only parameters of the derived type

Ans:C

103. How many constructors can a class have?

(A) (

(R) 1

(C) 2

(D) any number

Ans:F

- **104.** The new operator
 - **(A)** returns a pointer to the variable
 - **(B)** creates a variable called new
 - (C) obtains memory for a new variable
 - (D) tells how much memory is available

Ans:C

105. Consider the following

statements: int x = 22,y=15; x =

(x>y) ? (x+y) : (x-y);

What will be the value of x after executing these statements?

(A) 22

(B) 37

(C) 7

(D) Error. Cannot be executed

Ans:B

- **106.** An exception is caused by
 - (A) a hardware problem
- (B) a problem in the operating system

(C) a syntax error

(D) a run-time error

Ans:D

- **107.** A template class
 - (A) is designed to be stored in different containers
 - **(B)** works with different data types
 - (C) generates objects which must be identical
 - **(D)** generates classes with different numbers of member functions.

Ans:B

114. A pure virtual function is a virtual function that

(A) has no body

(B) returns nothing

red

Yellow

Green

- (C) is used in base class
- **(D)** both **(A)** and **(C)**

Ans:D

- **115.** A static function
 - **(A)** should be called when an object is destroyed.
 - **(B)** is closely connected with and individual object of a class.
 - (C) can be called using the class name and function name.
 - **(D)** is used when a dummy object must be created.

Ans:C

- **116.** We can output text to an object of class *ostream* using the insertion operator<< because
 - (A) the *ostream* class is a stream
 - **(B)** the insertion operator works with all classes.
 - **(C)** we are actually outputting to cout.
 - **(D)** the insertion operator is overloaded in *ostream*.

Ans:D

- 117. The statement f1.write((char*)&obj1, sizeof(obj1)); (A) writes the member function of obj1 to f1.
 - **(B)** Writes the data in obj1 to f1.
 - **(C)** Writes the member function and the data of obj1 to f1.
 - **(D)** Writes the address of obj1 to f1.

Ans:B

- **118.** To convert from a user defined class to a basic type, you would most likely use.
 - **(A)** A built-in conversion function.
 - **(B)** A one-argument constructor.
 - **(C)** A conversion function that's a member of the class.
 - (**D**) An overloaded '=' operator.

Ans:C

- **119.** Which of the following is not the characteristic of constructor.
 - **(A)** They should be declared in the public section.
 - **(B)** They do not have return type.
 - **(C)** They can not be inherited.
 - **(D)** They can be virtual.

Ans:D

- **120.** Name the header file to be included for the use of built in function isalnum()
 - (A) string.h

(B) process.h

(C) ctype.h

(D) dos.h

Ans:C

121. What is the output of given code

fragment?

int f=1, i=2;

while(++i<5)

f*=i;

cout<<f;

(A) 12

(B) 24

(C) 6

(D) 3

Ans:A

- **122.** A class defined within another class is:
 - (A) Nested class

(B) Inheritance

(C) Containership

(D) Encapsulation

Ans:A

123. What will be the values of x, m and n after the execution of the following statements?

int x, m, n;

m = 10;

n = 15;

x = ++m + n++;

- **(A)** x=25, m=10, n=15
- **(B)** x=26, m=11, n=16
- (C) x=27, m=11, n=16
- **(D)** x=27, m=10, n=15

Which of the following will produce a value 10 if x = 9.7?

(A) floor(x)

(B) abs(x)

(C) log(x)

(D) ceil(x)

Ans:D

124.

{

125. The major goal of inheritance in c++ is:

- **(A)** To facilitate the conversion of data types.
- (B) To help modular programming.
- **(C)** To extend the capabilities of a class.
- **(D)** To hide the details of base class.

Ans:C

126. Consider the following class definitions: class a

```
};
class b: protected a
{
};
```

What happens when we try to compile this class?

- **(A)** Will not compile because class body of a is not defined.
- **(B)** Will not compile because class body of b is not defined.
- **(C)** Will not compile because class a is not public inherited.
- (D) Will compile successfully.

Ans:D

127. Which of the following expressions is illegal?

(A) (106).

- (B) (false && true)
- **(C)** bool (x) = (bool)10;
- **(D)** float y = 12.67;

Ans:C

- **128.** The actual source code for implementing a template function is created when
 - **(A)** The declaration of function appears.
 - **(B)** The function is invoked.
 - **(C)** The definition of the function appears.
 - **(D)** None of the above.

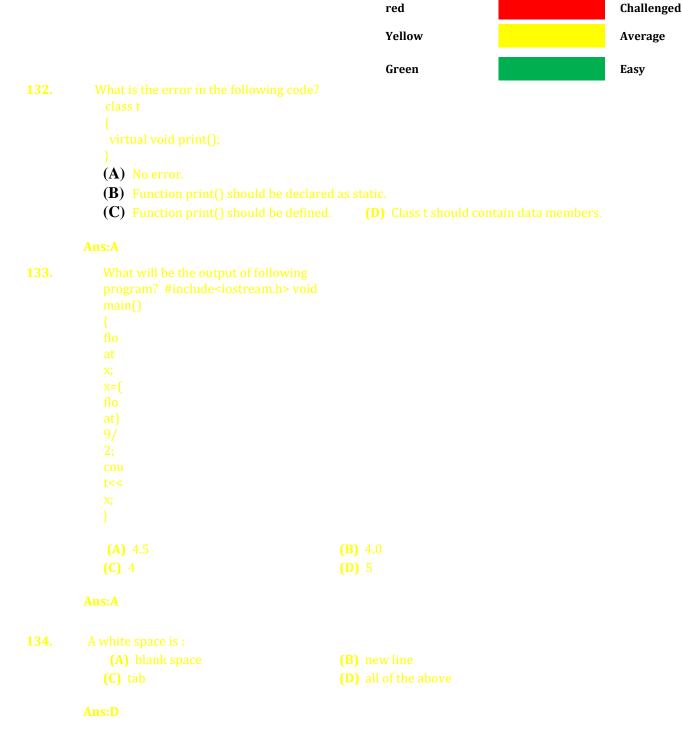

Ans:B

- **129.** An exception is caused by
 - (A) a runtime error.
 - **(B)** a syntax error.
 - **(C)** a problem in the operating system.
 - **(D)** a hardware problem.

Ans:A

- **130.** Which of the following statements are true in c++?
 - (A) Classes can not have data as public members.
 - **(B)** Structures can not have functions as members.
 - (C) Class members are public by default.
 - (D) None of these.

Ans:B

135. The following can be declared as friend in a class

(A) an object

(B) a class

(C) a public data member

(D) a private data member

Ans:B
